JESSIE TARROSA

SENIOR FULL-STACK ENGINEER · AI-ASSISTED DEVELOPMENT

Kasambagan, Cebu, Philippines | +63 919 210 6060 | app.creator@jessiet.dev | jessiet.dev | github.com/oreoseenoevil

PROFILE

Senior full-stack engineer with 9+ years shipping production web applications, now building and running my own software company. I work end to end (React, Next.js and TypeScript interfaces, Node services, and the AWS infrastructure underneath) and I build with an AI-first workflow in Claude Code: parallel agents working under written rules, with a type-check, lint and test gate before anything ships. Recent depth in financial systems: fund accounting, audit-safe transaction records, and budget tracking for property and community association management. Equally comfortable owning a product from market research and architecture through delivery, or plugging into a team as a senior contributor.

TECHNICAL SKILLS

LANGUAGES	TypeScript · JavaScript (ES6+) · SQL · Python · PHP
FRONT END	React · Next.js · Redux · Zustand · Tailwind · Material UI · SCSS/CSS · Chart.js · Mapbox GL JS · Webpack
BACK END	Node.js · tRPC · Express · Serverless / AWS Lambda · REST API design · Prisma · Mongoose · Microservices
DATA	PostgreSQL · MongoDB · MySQL · Elasticsearch · Redshift · Firebase · PlanetScale
CLOUD & OPS	AWS (EC2, S3, Lambda, RDS, API Gateway, CloudFront, Amplify, Elastic Beanstalk, ECS, CodePipeline/Build/Deploy) · Docker · Kubernetes · CI/CD · Vercel · Linux
AI-ASSISTED DEV	Claude Code · multi-agent workflows · spec-driven development · AI code review · OpenAI API · LLM product features
INTEGRATIONS	Stripe · PayPal · Auth0 · Keycloak · OpenAI · Web3 / Ethers.js · Moralis · Metamask · Polygon
PRACTICE	System architecture · Product & market research · Technical writing · Git / GitHub / GitLab / Bitbucket · JIRA · Agile

EXPERIENCE

Founder & Principal Engineer

2025 - Present

Tarrosa Software Development Services · Cebu, PH

Independent software company. Sole architect and engineer on Atrium OS, plus selected client infrastructure work.

- Building **Atrium OS**, an HOA and community association management platform targeting mid-size to large associations and multi-community property management companies, now also covering rental management for units leased on behalf of owners.
- Designed and built the financial core: fund-accounting-aware billing with tax-exclusive pricing, Statement of Account generation backed by snapshotted line items, sequential statement numbering, and audit-safety rules that keep issued documents immutable.
- Built the budgeting system: expense lines linked to budget allocations, encumbrance versus actuals tracking, and live remaining-balance calculation.
- Developed an interactive property map in **Mapbox GL JS** with satellite imagery, 3D terrain, parcel boundary overlays, and click-to-inspect unit records.
- Built the product with an AI-first workflow in **Claude Code**: written CLAUDE.md / AGENTS.md rules, parallel sub-agents with exclusive file ownership, and a type-check, lint and test gate on every change.
- Ran the market and compliance groundwork: competitive analysis against Vantaca, CINC, AppFolio, Enumerate and FRONTSTEPS; requirements mapping for CAM fund accounting, PCI DSS, NACHA and state HOA statutes; and a staged build roadmap.
- Owned the commercial side: enterprise EULA and licensing terms, product naming, positioning and domain strategy.
- Delivered client infrastructure engagements alongside product work, including a Dockerised application deployment on Windows Server backed by AWS CodeCommit.

> **STACK** Next.js · React · TypeScript · tRPC · Node.js · MongoDB · Tailwind · AWS · Docker · Mapbox GL JS

Full Stack Developer

Feb 2024 - Present

Confidential client (records and document platform)

- Architected and deployed cloud-based solutions on AWS (EC2, S3, Lambda and RDS) for highly scalable applications.
- Developed RESTful APIs and microservices in Node.js and Python behind API Gateway, with Elasticsearch powering search and data retrieval.
- Implemented CI/CD pipelines with CodePipeline, CodeBuild and CodeDeploy, automating deployment and shortening release cycles.

- Shipped React front ends hosted on Amplify and S3, using CloudFront as CDN for fast global delivery of static assets.
- Designed MongoDB schemas and query patterns tuned for performance and data consistency across distributed systems.
- Deployed and scaled containerised workloads on Elastic Beanstalk and ECS.

> **STACK** React · TypeScript · Node.js · Python · MongoDB · Elasticsearch · Serverless Stack · AWS · Linux · Material UI

Full Stack Developer (Web3)

Mar 2022 - Feb 2024

Codev & Permission.io

- Designed and built web3 applications with React front ends and Node.js back ends, creating responsive interfaces that interact directly with blockchain networks.
- Integrated Web3.js, Ethers.js and Moralis to read and write on-chain state; handled transactions, wallet management and secure authentication via Auth0, Passbase, Metamask and Polygon.
- Built pipelines for blockchain data (token balances, transaction histories and contract events) and surfaced them in Chart.js dashboards.
- Designed and maintained PostgreSQL databases for application and user data; containerised services with Docker and Kubernetes.
- Collaborated with blockchain engineers, designers and product managers, and maintained documentation for code, APIs and development processes.

> **STACK** React · TypeScript · Node.js · Redux · Webpack · Material UI · Docker · Kubernetes · PostgreSQL · Ethers · Web3 · Moralis · Auth0 · Passbase

Full Stack Developer (Contract)

Dec 2022 - Jan 2023

Fuxam

- Built server-rendered React and Next.js features with Zustand for state and Tailwind/SCSS for styling.
- Integrated Stripe for payment and subscription handling.
- Modelled and managed data with Prisma on PlanetScale for auto-scaling, high-availability storage.
- Added OpenAI-backed functionality and Chart.js data visualisations; deployed and hosted on Vercel.

> **STACK** React · TypeScript · Next.js · Node.js · Stripe · Prisma · PlanetScale · Tailwind · Vercel · Zustand · OpenAI · Chart.js

Advanced App Engineering Analyst / React Developer

Jul 2021 - Mar 2022

Accenture Inc.

- Built React and TypeScript interfaces backed by Node.js services for enterprise clients, with Redux managing application state.
- Implemented serverless back ends on AWS Lambda for scalable, cost-effective processing; deployed through S3, CloudFront and CI/CD.
- Modelled and queried analytics data in Redshift and SQL to power reporting features and Chart.js dashboards.
- Delivered in an Agile workflow tracked in JIRA, holding code quality with ESLint and Prettier standards.

> **STACK** React · TypeScript · Node.js · Redux · Serverless Lambda · AWS · Redshift · SQL · Bootstrap · Material UI · JIRA

Full Stack Developer

Jan 2020 - Jun 2021

Freelance

- Built React and Redux applications on Express and Node.js for a range of independent clients.
- Integrated the PayPal API for payment processing along with assorted third-party APIs.
- Worked across SQL and MongoDB for data storage; styled with Material UI and SCSS.

> **STACK** React · JavaScript · Express · Node.js · Redux · PayPal API · SQL · MongoDB · Material UI · SCSS

Web Developer / Graphic Designer

May 2015 - May 2016

Landasia Real Estate and Development Corp.

- Built and maintained the company web presence (landing page, marketing subpages, property listings and subdomain setups) with responsive layouts from small to large screens.
- Designed print and marketing collateral including brochures, tarpaulins, magazine spreads and flyers.

> **STACK** PHP · WordPress · HTML · CSS · JavaScript · Photoshop · Illustrator

EDUCATION

BS in Information and Communication Technology

Apr 2016

Cebu Technological University
